River Appreciation Day Festival

July 15th
Whistlers Bend Park
1-8pm

Live Music all day!
• Virgil Robinson
• Kim Angelis
• Enjuh
• Mr. D. J. T

Booths & Vendors
featuring local organizations, businesses, artisans, & crafters. Kids activities throughout the day.

Food, Camping & Fun!
Food and drinks will be sold throughout the day by Chief Cheezers and Innerspace Cafe. Camping is available for $5 / tent / night call Umpqua Watersheds for more info.

Raffle
Tickets on sale now at While Away Books, New Day Grocery, Promise Foods & Umpqua Watersheds. PRIZES:
• Breitenbush Springs Stay
• Terry Woodall carved fish
• Free float trip for 6
• Many more!
**Need not be present to win**

Food, Camping, & Fun!
Food and drinks will be sold throughout the day by Chief Cheezers and Innerspace Cafe. Camping is available for $5 / tent / night call Umpqua Watersheds for more info.

Rafting & Disc Golf
Raffling shuttle leaves at 7:30am from Whistlers Bend. Bring your own gear. Call Umpqua Watersheds to sign up. Disc golf course at park - FREE.
Contact Umpqua Watersheds for more information: 541-672-7065  uwp@umpqua-watersheds.org  www.umpqua-watersheds.org

Roadless Areas
Umpqua’s History & Umpqua’s Future . . .

by Penny Lind

The strengths of our Northwest Roadless Areas, like those in the Umpqua, display a long history of birth, growth, change and recovery for multiple reasons – nature and native people drove these actions before the 19th century. Like the core of nature in our region, these valuable bio-diverse support systems to our World have been an anchor and national symbol for clean air and water, rich vegetation for wildlife, cool healthy homes for fish and bold, in your face, renewal miracles for you and me.
Even today, we are able to live and work within these forests and on the edge of the rivers, to camp, hike and enjoy their very souls through smell, sight and so much more. These symbols of our Northwest culture are ours to protect for the future.
The 19th and 20th centuries brought major change to these symbolic forestlands and rivers . . . our plans and hands delivered some alarming results that took big bites out of our forests. The ‘whole’ concept that spread across broad landscapes in the past has been diminished too much smaller ‘areas’ today. Those valuable, but shrunken wildlife cores are threatened further through the current administration’s bigger plans and much bigger hands to reduce Roadless Area protection, and allow road building and logging.
The Roadless Area Conservation Rule of 2001 that protected 58.5 million acres (2% of the U.S. land base) needs support from everywhere and everyone. The Rule’s purpose intended to rescue forest values, recreation opportunities, provide privacy and seclusion, deliver sources of water to communities and provide research and education. To attain that purpose timber harvest, and road building and reconstruction activities had to be stopped in our watersheds.
However, the Bush administration’s twisted path to reduce Roadless Area protections continues to be relentless. Through the good work and good will of so many leaders and supporters like you, Roadless protection still has a chance.
Today, science and our own hearts tell us those past and future plans to strip away Roadless protections are not in our best interest and that we, the people, need to make a new history in the 21st Century to guarantee what’s necessary for the future. . . .
From the Executive Director

With Gratitude . . . THANKS to Umpqua Watersheds’ leaders

Dear Supporters,

Conservation Leadership in our community is on the rise and comes from all around the watershed. The wholehearted splash and flow of this growth helps fulfill Umpqua Watersheds’ conservation goals to protect and restore our forests and rivers.

For the past 20 years many of your neighbors have put their volunteer, leadership skills to work to build, maintain and expand Umpqua Watersheds’ work in Southwest Oregon. Thanks to the current and past board members, donors and volunteers, we have made huge progress. We are working to protect our forests and rivers to serve future generations.

This summer, I have the privilege to introduce you to two new board members and give our gratitude to four retiring board members.

2006 New Umpqua Watersheds Board Members

Ted Swagerty – Recent Umpqua Community College graduate, journalist, campaigner and member of our Finance Committee.

Diana DeGroot – Original River Appreciation Day Committee member, Massage Therapist, artist and member of our Outreach Committee.

2006 Retiring Umpqua Watersheds Board Members

Sally Browne, Jim Wolf and Leslee Sherman

Thank you for all of your dedication to the environment: making change happen in our community and getting protection and restoration results on the ground. That’s what it takes, people like you who want better outcomes for our wild forest and mighty rivers. Consider a conservation leadership role for yourself in the Umpqua. Please step in our office in downtown Roseburg, call or send an email and join our effort to continue the growth of a strong organization that can deliver important conservation goals for the Umpqua and beyond.

In appreciation,

Penny Lind, Executive Director
In a proposal largely driven by the California energy market, PG&E, Fort Chicago of Canada, and Williams Pipeline Company are jointly proposing to build a $750 million natural gas pipeline connecting the proposed Jordan Cove liquefied natural gas (LNG) terminal near Coos Bay to the pipelines at Malin, OR near the California border. The 221-mile, 100-foot-wide project will cross the Umpqua, Coos, Klamath, and Rogue Rivers as well as many other streams and tributaries, threatening to severely disrupt the quality of fish and wildlife habitat throughout SW Oregon.

The “Pacific Connector” route demonstrates that California’s market is targeted for LNG imported in North Bend’s proposed Jordan Cove terminal. Rory Cox, coordinator of the Coalition Ratepayers for Affordable Clean Energy (RACE), recently visited North Bend to urge Oregonians to oppose the pipeline, which the RACE coalition opposes in favor of renewable alternatives. In his view, “The Pacific Connector isn’t about you in Oregon; it’s about us in California.” Rory and local opponents of Jordan Cove and the Pacific Connector note that Oregon is now the recipient of energy proposals that failed in Northern California, most notably in Eureka and Vallejo.

Even as California, Oregon, and many other states ponder measures for increasing renewable energy use, PG&E and its partner companies are planning to use Oregon as a back door for California’s fossil fuel addiction. Most of SW Oregon will see little or no economic benefit from the project, although the economic and environmental impacts of this huge, speculative bid on California’s energy market will persist for decades in the affected watersheds. Additionally, the Connector will require the use of eminent domain on local private lands, and many owners have already vowed to refuse access or rights-of-way to their lands for a California-driven project.

Concerned Oregonians in the Umpqua River watershed and beyond will be organizing to oppose the Pacific Connector in the coming months by participating in federal hearings, supporting landowners along the pipeline route, and educating more Oregonians about the negative impacts of the project. Particularly when Oregon’s weak natural gas demand does not justify this huge pipeline, the Pacific Connector is an extreme and unnecessary alteration of Oregon’s landscape and the Umpqua River watershed.

For more information please see F.L.O.W.’s website: www.floworegon.org

Wilderness Youth Campout 2006

Calling All Youth! Join Nelli Williams, Umpqua Watersheds’ Outreach Coordinator, for the annual Wilderness Youth Campout July 21-23rd. It is a weekend full of wilderness summer fun including swimming, hiking, campfire cooking, camping and learning about wild places. Below are a few details you can talk to your parents about.

What: A weekend of camping fun featuring educational activities, outdoor recreation and of course... S’mores!

Where: Twin Lakes Shelter, Umpqua National Forest

When: July 21-23rd, 2006

Cost: FREE for Umpqua Watersheds members, $10 for non-members. Scholarships available.

Who: Ages 12-20

How to sign-up: Call (672-7065) or email (nelly@umpqua-watersheds.org). Nelli at Umpqua Watersheds and leave your name and address. An information packet will be sent to you, which you fill out and return. Space is limited. There will also be a pre-trip meeting on Thurs. July 20th, 6pm at the Umpqua Watersheds office (139 SE Main St. in Roseburg).
From the President

This is my first column as President of the Umpqua Watersheds Board of Directors. It’s exciting to think of all that this organization and its predecessors have accomplished working on the Umpqua watershed and beyond. There are thousands of old trees standing, creeks and rivers running clearer because of your work and support. Fish are getting to their historical spawning grounds, and animals are still living in the ancient forests that surround us.

We will always have more work than time, energy, and money, but each year we look back on serious accomplishments. Whenever I get discouraged I just have to walk to the edge of the North Umpqua and look into it’s clear waters to appreciate the importance of our mission. We will never be able to protect all that needs preserving, but each day we have a positive impact on our environment. We have been able to save many of nature’s wonders for our children and the generations that will follow them.

So let’s roll up our sleeves, give all we can of our time and money, and continue our work to save the best and protect the rest. Give this newsletter to a neighbor or friend when you are finished and ask them to join our work.

Chuck Schnautz
Umpqua Watersheds Board President

Roadless (continued from page 1)... This summer and early Fall you will have the opportunity to join with Oregon’s Governor in that effort. Our Roadless Areas like Bulldog Rock, Cougar Bluff, Last Creek, Dread & Terror, Donegon Prairie, Mt. Bailey and others will need your voice as protection of these treasures become harder to hold onto. Umpqua Watersheds will keep you informed as opportunities to act develop.

This past year, Oregon’s Governor has sorted through much of the Bush administration’s obstacles to Roadless Area protection, and remains committed to gain 100% protection for Oregon. Umpqua Watersheds applauds Governor Kulongoski as he wades administrative, legal and policy challenges to regain Roadless Area protection for our futures.

Specifically, the Governor’s recent public and legal efforts to turn around unwise management in the Biscuit fire Roadless Area brings back wisdom into this complicated arena. U.S. Representative Peter DeFazio has also joined the Governor to halt these bad plans for our Roadless Areas to the South. Like anything political in our heady democracy, these challenges need you to help bring about permanent protections for our old, wild forests in the Umpqua.

ACT NOW: You can begin with hearty thank you calls, letters or email to the Governor and Representative DeFazio. You can also demand other leaders act in consort to bring about Roadless Area protection in Oregon. This project also included identifying and cataloging 11 other associated mollusk species. The survey methodology is confined to spring and fall by temperature and moisture parameters; I have completed most of it, with the remainder to be done this autumn. For me, the work was at various times fascinating, difficult, tedious, rewarding, and surprising. It involved driving over 1,800 miles (many on gravel roads), climbing up steep slopes and loose talus, and dealing with ticks, poison oak, and bad roads. But it was very interesting to focus on small creatures in a micro habitat. I had surprise encounters with scorpions, snakes and salamanders, as well as a spotted owl and bobcat. Overall, it was a terrific experience, and I look forward to helping analyze the preliminary results, for a possible publication in the future.

Hopefully, this cooperative experience will strengthen the working relationship between the BLM and UW that will continue with other projects in the future.

Roadless Area Conservation Rule – Chronological Summary

2000 Clinton administration drafted the Roadless Area Conservation Policy

More than 2.5 million public comments were received to support the Policy

2001 Policy signed by Secretary Glickman

Legal challenges filed to impose Roadless protection Policy by states & industry

2002 Legislative & legal support of original 2001 Roadless Policy filed

More than 800,000 comments received; majority support Roadless protection

2003 More legislative & legal support of 2001 Policy filed

2004 Forest Service decides to log Roadless areas in the Siskiyou National Forest

Governor Kulongoski of OR objects to Siskiyou Roadless logging

November 18th is the deadline for Roadless Area petitions under the Bush rule. Governor Kulongoski petitions the Administration to allow OR to implement the 2001 Rule

2005 Governor Kulongoski petitions the Administration to allow OR to implement the 2001 Rule

The Siskiyou National Forest auctions off Roadless timber sale – BOO!!!

Governor Kulongoski & Rep. DeFazio take action to halt harmful timber sale – YEAH!

November 18th is the deadline for Roadless Area petitions under the Bush rule.

What to Expect: Public comment periods, public hearing, media coverage and Bush shenanigans, before and after the November deadline. YOU will be able to make a difference – stay tuned.

Mollusks Create Partnership between BLM and UW

In a collaborative effort, Umpqua Watersheds has partnered with the BLM to perform a survey of a Sensitive Species. Nancy Duncan, a longtime BLM Wildlife Biologist and recognized expert on mollusks, approached Penny Lind, Executive Director of UW, about working on a Challenge Cost Share Project that was available. Penny asked me, Tim Ballard, former Conservation Associate, if I was interested in performing the survey work. I was, and after some home study, classroom and field training with Nancy on species identification and survey techniques, I began working.

The project focused on locating Helminthoglypta hertleini (HeHc), a terrestrial mollusk. These rare snails, whose common name is the Oregon Shoulderband, prefer rocky habitat. Nancy had selected 36 rock quarries for searching, and additional miles of road and other projects where rock from those quarries has been used. We are trying to determine what land management activities have affected the species, and how. It may be that some BLM projects associated with rock such as culvert installation, rip-rap placement and bridge repair/construction have actually helped increase the distribution of the species by incidentally carrying live snails or eggs with the rocks, starting new colonies where they are placed in suitable habitat. In addition, results may indicate where some portions of occupied quarry sites should be managed for the continued occupation by the species.

This project also included identifying and cataloging 11 other associated mollusk species. The survey methodology is confined to spring and fall by temperature and moisture parameters; I have completed most of it, with the remainder to be done this autumn. For me, the work was at various times fascinating, difficult, tedious, rewarding, and surprising. It involved driving over 1,800 miles (many on gravel roads), climbing up steep slopes and loose talus, and dealing with ticks, poison oak, and bad roads. But it was very interesting to focus on small creatures in a micro habitat. I had surprise encounters with scorpions, snakes and salamanders, as well as a spotted owl and bobcat. Overall, it was a terrific experience, and I look forward to helping analyze the preliminary results, for a possible publication in the future.

Hopefully, this cooperative experience will strengthen the working relationship between the BLM and UW that will continue with other projects in the future.

For Those Left Standing: Cow Catcher 2006 by Francis Eatherington

Wildlife Service. Old growth here is doubly important because it provides a connection between owl populations in the Coast Range, the Klamath/Siskiyou Mountains, and across Interstate 5 to the Cascade Mountains.

But in spite of the importance of this habitat, the BLM insists the old growth must be cut down and converted into a young tree plantation. When the BLM first sold the forest to DR Johnson Umpqua Watersheds sued, because the BLM did not do the required surveys for rare species, including the Red Tree Vole, an important food source for the Northern Spotted Owl. Earlier the BLM had decided that the Red Tree Vole did not need to be protected, even in this critical habitat for the owl.

The 9th circuit court of appeals won’t hear our case until fall.

Meanwhile, DR Johnson has announced they will build the road into unit 5 this summer, cutting down many old-growth trees in their path, including the tree shown on the left. Logging will probably be underway in July. As heartbroken as we are about losing these ancient, irreplaceable trees, we still hope that we can save the rest of the 146 acres of the timber sale after our case is heard in court this fall.

But in spite of the importance of this habitat, the BLM insists the old growth must be cut down and converted into a young tree plantation. When the BLM first sold the forest to DR Johnson Umpqua Watersheds sued, because the BLM did not do the required surveys for rare species, including the Red Tree Vole, an important food source for the Northern Spotted Owl. Earlier the BLM had decided that the Red Tree Vole did not need to be protected, even in this critical habitat for the owl.

The 9th circuit court of appeals won’t hear our case until fall. Meanwhile, DR Johnson has announced they will build the road into unit 5 this summer, cutting down many old-growth trees in their path, including the tree shown on the left. Logging will probably be underway in July. As heartbroken as we are about losing these ancient, irreplaceable trees, we still hope that we can save the rest of the 146 acres of the timber sale after our case is heard in court this fall.
In a proposal largely driven by the California energy market, PG&E, Fort Chicago of Canada, and Williams Pipeline Company are jointly proposing to build a $750 million natural gas pipeline connecting the proposed Jordan Cove liquefied natural gas (LNG) terminal near Coos Bay to the pipelines at Malin, OR near the California border. The 223-mile, 100’ wide section of right-of-way crosses the Umpqua, Coos, Klamath, and Rogue Rivers as well as many smaller streams and tributaries, threatening to severely disrupt the quality of fish and wildlife habitat throughout SW Oregon.

The “Pacific Connector” route demonstrates that California’s market is targeted for LNG imported in North Bend’s proposed Jordan Cove terminal. Rory Cox, coordinator of the coalition Ratepayers for Affordable Clean Energy (RACE), recently visited North Bend to urge Oregonians to oppose the pipeline, which the RACE coalition opposes in favor of renewable alternatives. In his view, “The Pacific Connector isn’t about you in Oregon; it’s about us in California.” Rory and local opponents of Jordan Cove and the Pacific Connector note that Oregon is now the recipient of energy proposals that failed in Northern California, most notably in Eureka and Vallejo.

Even as California, Oregon, and many other states ponder measures for increasing renewable energy use, PG&E and its partner companies are planning to use Oregon as a back door for California’s fossil fuel addiction. Most of SW Oregon will see little or no economic benefit from the project, although the economic and environmental impacts of this huge, speculative bid on California’s energy market will persist for decades in the affected watersheds. Additionally, the Connector will require the use of eminent domain on local private lands, and many owners have already vowed to refuse access or rights-of-way to their lands for a California-driven project.

Concerned Oregonians in the Umpqua River watershed and beyond will be organizing to oppose the Pacific Connector in the coming months by participating in federal hearings, supporting landowners along the pipeline route, and educating more Oregonians about the negative impacts of the project. Particularly when Oregon’s weak natural gas demand does not justify this huge pipeline, the Pacific Connector is an extreme and unnecessary alteration of Oregon’s landscape and the Umpqua River watershed.

Wilderness Youth Campout 2006

Calling All Youth! Join Nelli Williams, Umpqua Watersheds’ Outreach Coordinator, for the annual Wilderness Youth Campout July 21-23rd. It is a weekend full of wilderness summer fun including swimming, hiking, campfire cooking, camping and learning about wild places. Below are a few details you can talk to your parents about.

What: A weekend of camping fun featuring educational activities, outdoor recreation and of course...S’mores!

When: July 21-July 23rd, 2006

Where: Twin Lakes Shelter, Umpqua National Forest

Cost: FREE for Umpqua Watersheds members, $10 for non-members. Scholarships available.

Who: Ages 12-20

How to sign-up: Call (672-7065) or email (nelly@umpqua-watersheds.org) Nelli at Umpqua Watersheds and leave your name and address. An information packet will be sent to you, which you fill out and return. Space is limited. There will also be a pre-trip meeting on Thurs. July 20th, 6pm at the Umpqua Watersheds office (139 SE Main St. in Roseburg).

---

Conservation UPDATE:

Dickerson Heights: The Roseburg BLM has sold this 128 acres of mature and old growth forests 10 miles west of Winston, near the spectacular Dickerson Rocks. We are appealing the BLM’s decision now.

Green Thunder: In January the Roseburg BLM sold 114 acres of mature and old growth forests in the Little River watershed, south of Glide. We protested, BLM’s term for a request for reconsideration, that decision. The BLM has conceded some of our protest points and has issued a revised Environmental Assessment (EA). Unfortunately, the revised EA just further justifies logging this public forest. We will continue to participate in the administrative appeals of Green Thunder.

Can Can: In May we protested the Roseburg BLM decision to sell part of this project, a sale called “Myrtle Morgan,” 2.3 miles north of Canyonville that would log 229 acres of mature and old growth forests. When the BLM responds that they will not consider our request to reconsider the decision, we will appeal the decision to the Interior Board of Land Appeals.

Whatags: We are awaiting a final decision from the BLM to sell this mature and old growth forests east of Sutherlin. We are glad no decision has been forthcoming since you wrote your comments to BLM in January, asking them to spare the Coquille project.

In Can Can: We are awaiting a final decision from the BLM to sell part of this project, a sale called “Myrtle Morgan,” 2.3 miles north of Canyonville that would log 229 acres of mature and old growth forests. When the BLM responds that they will not consider our request to reconsider the decision, we will appeal the decision to the Interior Board of Land Appeals.

Whatags: We are awaiting a final decision from the BLM to sell this mature and old growth forests east of Sutherlin. We are glad no decision has been forthcoming since you wrote your comments to BLM in January, asking them to spare the Coquille project.

Norris and Field Creek owl pairs who use these forests for foraging.

Pleasant Yankee: Coquille project: In May the Coos Bay BLM denied our request for reconsideration (protest) for selling this Marbled Murrelet habitat north of Coquille Oregon. Along with Cascadia Wildlands Project, we appealed that decision.

Thinning sales: We have been involved with the Forest Service and the BLM thinning sales, supporting the restoration components of these projects, as well as asking for increased environmental protections from the commercial logging by-products. Recent sales include the Umpqua National Forest Lobo timber sale in Steamboat Creek and the Middle Creek Thin II project from Coos Bay BLM.

Umpqua Lighthouse State Park: Thank you to the many people who submitted comments to the state of Oregon, asking for the 200 acres north of the State Park to be sold to the park, and not rezoned commercial/residential. We will keep you informed of the Division of State Land decision, expected later this summer.

ODF Elliott State Forest, BLM Western Oregon Plan Revisions, and FERC 36” Pipeline through southern Oregon: We are awaiting the draft Environmental Impact Statements for all of these projects and will let you know when your voice and letters are needed.

From the Executive Director

With Gratitude . . . THANKS to Umpqua Watersheds’ leaders

Dear Supporters,

Conservation Leadership in our community is on the rise and comes from all around the watershed. The wholehearted splash and flow of this growth helps fulfill Umpqua Watersheds’ conservation goals to protect and restore our forests and rivers.

For the past 30 years many of your neighbors have put their volunteer, leadership skills to work to build, maintain and expand Umpqua Watersheds’ work in Southwest Oregon. Grace to the left of your letter and you’ll see the current team made up of veterans and new members.

The leadership roles at Umpqua Watersheds are limitless . . . I invite you to jump in with your enthusiasm and action to write letters, lead & enjoy hikes and field tours, govern at the board table, develop events and volunteer programs, raise support dollars, or lend a hand and your personal vote of confidence to our busy staff.

This summer, I have the privilege to introduce you to two new board members and give our gratitude to four retiring board members.

2006 New Umpqua Watersheds Board Members

Ted Swagerty – Recent Umpqua Community College graduate, journalist, campaigner and member of our Finance Committee.

Diana DeGroot – Original River Appreciation Day Committee member, Massage Therapist, artist and member of our Outreach Committee.

2006 Retiring Umpqua Watersheds Board Members

Sally Browne, Jack DeAngeles, Jim Wolf and Leslee Sherman

Thank you for all of your dedication to the environment: making change happen in our community and getting protection and restoration results on the ground. That’s what it takes, people like you who want better outcomes for our wild forest and mighty rivers.

Consider a conservation leadership role for yourself in the Umpqua. Please step in our office in downtown Roseburg or call or send an email and join our effort to continue the growth of a strong organization that can deliver important conservation goals for the Umpqua and beyond.

In appreciation,

Penny Lind, Executive Director

Umpqua Watersheds Conservation Leaders & Staff

1995-2006

Book Review!

Rare Bird: Pursuing the Mystery of the Marbled Murrelet by Carol Gale

The little marbled murrelet is a most extraordinary bird. It behaves both like a seabird and a forest nesting bird, but has a way all its own. If you read Rare Bird: Pursuing the Mystery of the Marbled Murrelet by Maria Mudd Ruth, you may find yourself laughing with joy and admiration that such a sturdy, non-conformist, modest, little seabird continues its hard-working life despite overwhelming odds.

Picture a robin-sized seabird with webbed feet and a 4-inch long fish in its beak lifting off from the sea and flying inland to a remnant stand of old growth coastal forest. This marbled murrelet parent brings a whole fish to its chick 150 feet up on the wide mossy limb of a huge old tree. The bird works hard, flying as many as five, ten, even 40 miles to reach the chick, wings beating at speeds approaching the whirl of hummingbirds, fighting the drag of the fish and its own chubby shape. Observers affectionately describe the murrelet as “a flying baked potato with a beak.”

The parent crashes-lands on the wide limb because its webbed feet are designed for swimming, not walking or clinging to branches. It can sit motionless 11 minutes while the chick begs to be fed, apparently recovering from its long flight, then suddenly pass the whole fish over and depart again for the sea.

Alone, the tiny chick moves the fish (looking longer than itself) by opening and closing its beak, until it can flip the tail up and swallow the fish headfirst, whole.

Most Auks, the murrelet’s seabird group, breed on rocky shores or cliffs in noisy colonies. Not the murrelet. Sometime in the distant past, murrelets survived better flying into coastal forests and using large moss-covered limbs on huge trees for their nests. There, parents keep their single egg warm in 24-hour shifts, changing places at dawn after one has fed at sea.

Due to this atypical nesting behavior, humans couldn’t find a murrelet nest for nearly two centuries after the 1779 discovery of the species in Pacific Northwest coastal waters, where marbled murrelets spend 95% of their lives. People searched the shore and others watched murrelets flying with fish into the forest, but they looked in both places for nests on the ground.

Finally, a nest was accidentally discovered in 1974, during a safety trim in a state park campground. An experienced logger-turned-tree-trimmer, Hoyt Foster, scaled a 220 ft Douglas fir with his pruning saw. On a limb where he was about to place his foot, a little creature he’d never seen before confronted him. He described it as “a squashed up cornpuse with a beak.” Foster had never heard of marbled murrelets. He moved his pruning saw towards it hoping it would fly away, but the tiny bird wouldn’t budge and pecked at the saw! Then he
River Day
July 15th
Whistlers Bend Park
1-8pm

Live Music all day!
• Virgil Robinson
• Kim Angelis
• Enjuh
• Mr. D.J.T

Raffle
Ticket on sale now at While Away Books, New Day Grocery, Promise Foods & Umpqua Watersheds.
PRIZES:
• Breitenbush Springs Stay
• Terry Woodall carved fish
• Aire flume trip for 6
• Many more!
**Need not be present to win**

Booths & Vendors
featuring local organizations, businesses, artisans, & crafters. Kids activities throughout the day.

Food, Camping & Fun!
Food and drinks will be sold throughout the day by Chief Cheezers and InterSpace Cafe. Camping is available for $5/tent/night call Umpqua Watersheds for more info.

Rafting & Disc Golf
Rafting shuttle leaves at 7:30am from Whistlers Bend. Bring your own gear. Disc golf course at park - FREE.

Contact Umpqua Watersheds for more information: 541-672-7065 • uw@umpqua-watersheds.org  www.umpqua-watersheds.org

Roadless Areas
Umpqua’s History & Umpqua’s Future . . .
by Penny Lind
The strengths of our Northwest Roadless Areas, like those in the Umpqua, display a long history of birth, growth, change and recovery for multiple reasons – nature and native people drove these actions before the 19th century.
Like the core of nature in our region, these valuable bio-diverse support systems to our World have been an anchor and national symbol for clean air and water, rich vegetation for wildlife, cool healthy homes for fish and bold, in your face, renewal miracles for you and me.
Even today, we are able to live and work within these forests and on the edge of the rivers, to camp, hike and enjoy their very souls through smell, sight and so much more. These symbols of our Northwest culture are ours to protect for the future.
The 19th and 20th centuries brought major change to these symbolic forestlands and rivers . . . our plans and hands delivered some alarming results that took big bites out of our forests. The ‘whole’ concept that spread across broad landscapes in the past has been diminished too much smaller ‘areas’ today. Those valuable, but shrunken wildlife cores are threatened further through the current administration’s bigger plans and much bigger hands to reduce Roadless Area protection, and allow road building and logging.
The Roadless Area Conservation Rule of 2001 that protected 58.5 million acres (2% of the U.S. land base) needs support from everywhere and everyone. The Rule’s purpose intended to rescue forest values, recreation opportunities, provide privacy and seclusion, deliver sources of water to communities and provide research and education. To attain that purpose timber harvest, and road building and reconstruction activities had to be stopped in our watersheds.
However, the Bush administration’s twisted path to reduce Roadless Area protections continues to be relentless. Through the good work and good will of so many leaders and supporters like you, Roadless protection still has a chance.
Today, science and our own hearts tell us those past and future plans to strip away Roadless protections are not in our best interest and that we, the people, need to make a new history in the 21st Century to guarantee what’s necessary for the future.
